

Recording Haast Tokoeka calls on Pomona Island

The Pomona Trust has an enthusiastic volunteer currently running audio monitoring of Haast Tokoeka across the island.

Using audio moths at 10 different locations at a time.

He is using a AviaNZ Tokoeka recogniser to detect kiwi calls.

They are then hand labelled to check for true positives.

Has collected over 5700 calls so far. He has identified 10 pairs calling to each other this season. One aim is to identify individual birds.
